## PROJECTS

### OVERTAKING ASSISTANCE SYSTEM

10/2018

System to assist drivers as they plan on overtaking the vehicles in front of them using vision and Cloud to Vehicle communication.

### FOS: FIRE SOS SYSTEM

09/2018

Multi modal real-time fire management system which gathers data from satellite data, crowd sourcing and dispatched UAVs for localization of people and fire on SOS through an Android App via cloud, effective path planning for escape and after-effect reduction using beacon system.

### VIDEO ADVERTISEMENTS EFFECTIVENESS ANALYSIS

04/2018

It involved a multi-modal Deep Learning approach. The Audio Analysis and Action Recognition Modes gave a baseline accuracy for shortened dataset. Modes such as shot boundary detection makes up the next part.

### MUSIC GENERATION USING DEEP LEARNING

01/2018

Used Recurrent Neural Networks (SRNs, LSTMs and GRUs). Developed as an experimental analysis of different techniques and achieved an accuracy of 54% on validation set, suggesting new sequence generation

### INDIANIZED ROAD DATASET

11/17-05/18

Created an Indianized Dataset for detection and tracking benchmarking with 7 different classes and more than 60,000 frames.

### SPACE ROBOTICS- FIREBIRD V SWARM ROBOTICS

03/2017

Interfaced 2 ATmega2560 based firebirds to traverse complex arena by shortest path finding, mechanism to strike on end points, re-routing for obstacles and following a sequence by Zigbee 2.4C Xbees serial comm.

### PLANET TERRAIN ANALYZING AND MODELLING

03/2017
